

LEADER TECHNOLOGY

Power Deep cycle Battery

■ Case & Cover

1. Use of Polypropylene(PP) resin.
2. A special saddle plate installed for prevention of a short on the bottom from withdrawal of active substances.
3. A design which keeps in electrolyte from being leaking

■ Separators

1. Use in highly porous and corrosion-resistant PVC or PE material.
2. A glass mat applied to the surface to prevent withdrawal objective substances.
3. Low electric resistance and excellent physical traits.

■ Plates

1. Made from 99.99% or higher purity lead processed into an active substances.
2. Use an antimony alloy metal with higher corrosion-resistance on the board.
3. The negative plate uses highly porous and deep cycle-resistant additives.
4. A special additive applied the positive plate for long service life.

■ Electrolyte & Cap

1. Electrolyte contain highly pure, refined sulfuric acid (KS M 1203 No.3 or higher)
2. CAP has a structure that can filter acid haze and gas generated during the recharge step 3, discharge only the gas.
3. Uses a flame arrestor that can prevent an explosion from inflammation of the interior.
